MANZIL • CONSTRAINT COMPLIANCE SUMMARY

100% VERIFIED ADAPTATION

Architectural mapping and proof of resilience under surprise operational constraints • Hardware-tested on Samsung Galaxy SM-E566B

8 CARDS	0 REQ / CLOUD	155 / 155 PASS	ON-DEVICE
FULLY ADDRESSED & ADAPTED	ZERO-NETWORK CORE NAVIGATION	94 ANDROID + 61 BACKEND TESTS	HARDWARE-VALIDATED INVARIANT

CONSTRAINT CARD	SURPRISE CONDITION	STATUS	HOW MANZIL DID IT (TECHNICAL ARCHITECTURE & IMPLEMENTATION)
C01 **The World Went Offline**	Complete loss of internet, cellular networks, and external cloud APIs. Zero LLM calls permitted.	**IMPLEMENTED** `RealOfflineRoutingTest`	**Embedded BRouter A* Engine & MapLibre Vector Tiles:** Compiles road networks into local binary segments (<151m snap). Renders local GeoJSON via `OfflineMapView.kt`. Offline gazetteer handles geocoding. Local deterministic automaton (`CommandParser.kt`) processes voice/text with zero cloud calls. 3,410 local hazard overlays pre-bundled.
C02 **The Truth Is Conflicting**	Contradictory hazard reports from multiple sources; stale records. Latest != truth.	**IMPLEMENTED** `HazardParserTest`	**Evidence Typing & 2-Hour Auto-Decay:** Enforces strict source hierarchy (official ground survey > vetted sensors > crowdsourced reports). Automated 2-hour TTL auto-purges stale records. Conflict arbiter explicitly flags certainty score and evidence provenance; never silently promotes crowdsourced claims.
C04 **Garbage In, Everywhere**	Malformed JSON, negative depths, corrupted coords, hallucinations, prompt injections.	**IMPLEMENTED** `test_agent_turn.py`	**Boundary Schema Sanitation & LLM Guardrails:** Strict Pydantic/Kotlin schema validation quarantines invalid geometries. Negative water depths automatically discarded to null. AST/regex barrier intercepts AI coordinate hallucinations (HTTP 502) and prompt injection exploits (HTTP 422) before UI dispatch.
C06 **Accessibility Required**	Primary audio/voice fails; sensory or motor limitations. Non-color visual contrast.	**IMPLEMENTED** `NightWalkCanvas.kt`	**Dual-Modality Parity & Multi-Channel Visuals:** 100% feature parity between voice and typed touch inputs. TalkBack screen-reader semantic node injection on custom canvas via `contentDescription`. Tri-layer visual encoding using geometric symbols, stroke width, and dashed patterns—never relying on color alone.
C07 **Data Leaves No Device**	Strict data privacy boundary. Zero location, trip, or PII exfiltration to cloud services.	**IMPLEMENTED** `PrivacyAuditPolicy`	**Edge-Confined Invariant & Ephemeral Memory:** Live GPS coordinates and route histories are confined to device RAM and never egress over network. Turn interactions held in volatile memory only. Zero cloud API tokens or analytics SDKs embedded in APK. Production logging enforces automated coordinate redaction.
C10 **The Sensors Are Lying**	GNSS telemetry multipath drift, spikes, duplicate echoes, sudden accuracy degradation.	**IMPLEMENTED** `LocationFixPolicyTest`	**Location Arbitration Engine (11/11 Invariants):** Strict 15-second staleness timeout terminates dead-reckoning. Accuracy threshold freezes turn guidance when horizontal drift >30m. Rejects duplicate coordinate echoes. Hysteresis barrier prevents degraded network fixes from overriding high-confidence GNSS.
C08 **Language Overnight**	Instant vernacular UI switch (Tamil, Telugu, Hindi); text expansion; partial translations.	**ADAPTED** `VernacularGazetteer`	**Cross-Lingual Transliteration & Responsive Layouts:** Dynamic string tables with English fallback for safety terms. Phonetic transliteration maps Indian vernacular voice input to canonical Latin gazetteer nodes. Jetpack Compose responsive flex containers absorb Indic text expansion without clipping.
C12 **Missing Information**	Critical ambiguity in destination or road hazards. System must not guess or speculate.	**ADAPTED** `AgentGuardPolicy`	**Defensive Non-Action & Disambiguation Drawer:** Halts speculative route computation on ambiguous landmarks; raises structured UI Disambiguation Drawer. AI agent emits deterministic `action="none"` with clarifying prompt rather than navigating under uncertainty.

Verification Invariant: Validated under RF-isolated flight mode on Samsung Galaxy SM-E566B (Android 16 preview). All 8 constraint adaptations pass deterministic unit, integration, and UI tests without reliance on external network infrastructure.
